Audytor Lab simultaneous interpretation teaching system

Mentor's Audytor Lab is a one of a kind, cutting-edge solution to teach multilingual interpretation at university faculties of linguistics and independent schools.

System's purpose is to prepare future interpreters - via simulating real work environment through providing an actual simultaneous interpreter console and booth - for genuine conferences.

Audytor Lab - interpretation teaching system

System features:

- realistic simulation of a conference
- multi-track translation recording enables students' progress monitoring while giving an examination to a different group of students
- indirect (relayed) interpretation support
- up to 3 simultaneous floor audio channels
- 6 language audio channels
- 3 floor audio channels
- audio monitoring of students
- dialogue with students
- automatic listening to subsequent students
- sending an audio messages to chosen students
- listening to different audio channels in each ear
- audio recording of all the students simultaneously
- locking student consoles
- resetting student consoles to default settings

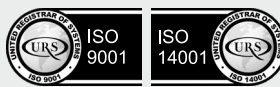

Implementations

University of Silesia in Katowice, Poland

Maria Curie-Skłodowska University in Lublin, Poland
