## Mentor Advanced digital language laboratory

It's our flagship language laboratory. Complete and integrated hardware with feature-rich software. The laboratory's unique all-in-one main unit has an OPS computer and a DVD drive built-in. Advanced each-with-each conversation management functionality and a "Together" bundle are also noteworthy features of the system. The "Together" bundle allows a teacher to be among his or her students and it consists of a tablet computer - to remotely control the laboratory - and a wireless headset. The laboratory can be also retrofitted with a module for connecting an uTrack24 audio recorder which can record up to 24 tracks at the same time.

### Unique and impressive features

Freely configurable **groups of two, three or four** students.

Up to 16 discussion groups can be created with **no restrictions**.

Route signals of up to **8 independent audio devices** to different groups of students.

Random **auto-creation** of discussion groups.

**Drag&Drop** - control the software simply by moving icons. It's fully adapted for touchscreen control.

### Parts

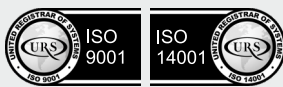

- **Main unit** of the system has a stereo amplifier, a DVD burner and an OPS computer with Windows OS, all integrated.
- **"Advanced" software** is an application to control the laboratory. It was created with touchscreen devices in mind.
- **ADV-MC application** - a two-channel software audio recorder with a „pronunciation coach" feature. The application is designed to be used in a language classroom where each student has an access to a PC.
- **Headset** - this durable and flexible headset tightly covers one's ears - blocking environmental sounds - without pressuring the head.
- **FullHD touchscreen display** (optional) enables touch control over the laboratory's functions. It's fast, intuitive and comfortable.
- **Audio recorder** (optional) perfect for recording and replaying dialogues and group discussions.

*Touch control over the laboratory, via a tablet computer*

### The „Together" bundle

**Wireless control over all of the laboratory's functions through a web browser of a tablet computer** with Android, iOS or Windows OS. Paired with a teacher's wireless headset, it allows working close with students, reacting to their needs quicker.
